50Hertz – Berlin

Object:

Electricity transmission grid operator 50Hertz moved into its new headquarters in the centre of Berlin in 2016. The company is dedicated to safely integrating renewable energy, developing the European electricity market and maintaining high supply safety standards. The new 50Hertz Netzquartier building was planned to meet the company's needs and built ecologically and sustainably. It comprises 13 floors above ground and one below, and offers a gross floor area of around 24.000 square metres. The workforce at 50Hertz were involved in the building's planning and interior design and they created a working environment that meets their everyday working needs while encouraging openness and collaboration. Fourteen Zip HydroTap® drinking water systems provide a convenient water source in the tea kitchens and there are also 60 of CLAGE's MCX4 and MCX7 electronic mini instantaneous water heaters right beneath the washbasins and in the tea kitchens.

Completion: September 2017
